

idOnDemand

Identity as a Service

■ **CONVENIENT**

Consolidate multiple credentials into a single secure ID card, replacing separate building and identity cards.

■ **HOSTED IDENTITY SERVICE**

Centralizes and automates the process of enrolling, producing and distributing identity credentials.

■ **SECURE, STANDARDS-BASED**

Globally trusted and issued in compliance with U.S. Government and major security standards.

■ **AFFORDABLE, PAY-AS-YOU-GO**

Simple 'pay-as-you-go' model offers one fixed price so you pay only for the users you need.

Intuitive Web Portal

Producing high quality ID cards doesn't have to be difficult or expensive. The intuitive idOnDemand web portal provides the easiest and most cost effective way to create and deliver a highly secure, standards-based single identity for access to all buildings, computers, cloud resources and smartphones.

Cloud-based Service Bureau

Identive's idOnDemand cloud-based identity management service brings immediate value to customers as it eliminates the overhead of owning and maintaining high cost printers and erases costs associated with card spoilage.

The idOnDemand service bureau handles the programming of your physical access formats in the cloud. Finished cards simply show up at your door, ready to use.

Typical Applications

- **Logical Access** - Grant authorized employees and contractors secure local and remote access to information and assets such as IT systems, data encryption and email with an idOnDemand SmartID.
- **Physical Access** - Upgrade out-of-date, insecure building access cards or consolidate multiple card systems into a single idOnDemand SmartID.
- **Cloud Resources** - Use your digital credential to secure information that you put into the cloud. An idOnDemand SmartID can encrypt and digitally sign your digital documents so you don't have to worry about a cloud provider securing your information for you. With an idOnDemand SmartID, users are not vulnerable to data theft as you control the security of your data.
- **Mobile Resources** - Identive cloud-issued idOnDemand SmartIDs can be produced with the capability to generate OATH-based One-Time Passwords (OTP). This can be done with any NFC-enabled device and an idOnDemand SmartID. This allows secure communication over any network and allows users to login with Two-Factor Authentication. You can also use this to turn any NFC-enabled phone into an OTP Token.

idOnDemand

Identity as a Service

idOnDemand Features

idOnDemand SmartID	
Visual identification card	Double-sided, high-resolution and over-edge printing.
Embedded visual security	Hologram and customized UV printing.
Contact and contactless	Smart card chip and contactless antenna for "touch", authorization, authentication and physical access systems.
Remote authentication	Authenticate to corporate Virtual Private Network (VPN) using a digital certificate or OATH-based One Time Password (OTP).
IT systems access	Login to your computer, websites and SaaS services with a digital certificate or OATH-based OTP.
Building access	Compatible with most popular technologies today; proximity, magnetic stripe, barcodes and PIV (FIPS 201).
Mobility	Simply touch corporate ID to facilitate the generation of an OATH-based OTP that can be used to login from tablet computers, smartphones or NFC-enabled hand-held devices.
Disk, file and email encryption	Protect critical information-based assets from leakage.
Electronic signatures	Root-trusted digital certificates allowing email, documents and other transactions to be electronically signed and validated internally and externally.
Interoperable	FIPS 201 compatible enables interaction with other companies, governments and compatible FIPS 201 equipment.
Secure	idOnDemand systems use FIPS140 approved Hardware Security Modules. Printers and smartcards are FIPS201 approved product listed. All facilities are located in a secure SSAE16 certified bunker.

idOnDemand Options

idOnDemand works with your infrastructure	
Local issuance	With local issuance, you have the choice of securely issuing idOnDemand SmartIDs on your premises while preserving the ability for remote users to access the idOnDemand global production facilities. This option is well suited for corporate headquarters or where urgent issuance of an idOnDemand SmartID is required.
Identity management interface	Enables a company's Identity Management System (IDM) to securely integrate with idOnDemand allowing automation of on-boarding and off-boarding employees, temps and contractors.
Local Certificate Authority	The Identive Cloud-based smartcard provisioning solutions allow the use of a local CA (Certificate Authority) as one of the supported CAs. This allows an idOnDemand SmartID to be issued with globally trusted certificates from root certificate providers, as well as a company's own certificates for internal use.
