

Veridt OSDP Integrated FICAM Readers Multimode Stealth Series

- **HIGH ASSURANCE**
 PIV Auth and PIV Auth + BIO verification provides higher assurance levels for personnel access into limited and exclusion security areas. PIV Auth is defined as a two-factor mechanism in NIST SP 800-116 and is suitable for use when accessing controlled and limited areas. PIV Auth + BIO, a three-factor authentication mechanism, can be used for access to any security area including exclusion.
- **INTEROPERABILITY AND COMMUNICATION**
 OSDP via RS-485 is used for secure challenge/response and other cryptographic verifications of FICAM credentials.

Identiv supports Veridt Stealth Series Readers to offer all of the functionality and capability of the MultiMode™ design architecture, including high assurance and multi-authentication modes in an IP 65 rated compact housing. The readers can be configured to operate a preset mode for one, two, or three-factor authentication or with Hirsch Velocity FICAM. The authentication mode is dynamically set by control zone, threat level, or time zone.
