

ACCESS CONTROL SOLUTIONS FOR

ASSISTED LIVING

Identiv addresses the changing needs of assisted living communities, incorporating minimal contact and totally touchless options aimed to keep residents and staff safe and healthy.

Assisted living communities and nursing homes are unique facilities when it comes to access control.

Pairing residential accommodations with healthcare — whether it's focused on disabled individuals who do or do not choose to live independently, or elderly patients who require convalescent care — presents a complex set of requirements.

Identiv's access control product portfolio tackles these requirements from different angles, covering everything from telephone entry to totally touchless access to video management system integrations.

These facilities are where healthcare providers devote themselves to helping people who need medical attention; but there's also the need to protect against unauthorized access, theft of medications, and patient wandering.

At the same time, these communities must maintain a level of accessibility and openness. Plus, the onset of COVID-19 has introduced new challenges related to patient monitoring, reducing the spread of infection, and maintaining a separation between those who have contracted the virus and those who have not.

Need to Secure an Assisted Living Facility?

Physical security solutions keep community members and staff safe and secure.

Enterphone Telephone Entry

Intelligent, integrated Enterphone is a feature-rich telephone entry system that can scale to care facilities of any size, protecting residents and staff from unauthorized access.

MobilisID Smart Mobile Access

MobilisID leverages Bluetooth to allow for complete frictionless access and can also integrate with ADA-compliant automatic door hardware for a totally touchless solution.

Hirsch Velocity Cirrus ACaaS

The flexibility of the cloud facilitates access control-as-a-service (ACaaS), enabling facilities to take advantage of the latest technologies with lower upfront and infrastructural costs.

Liberty Access Control

Cyber-centric access control for single sites uses mobile devices to determine proximity to a door for hands-free ingress and egress while also integrating with nurse call systems.

Live camera feeds and RFID technology provide up-to-the-minute tracking.

Freedom Access Control

Web-based access control for multi-site facilities uses mobile devices to determine proximity to a door for hands-free ingress and egress while also integrating with nurse call systems.

Freedom VMS Integration

Live camera feed is attached to every access event, giving staff a single pane to view security events and a streamlined process of keeping residents and patients safe.

RFID-Enabled UHF Tags

RFID-based solutions can track where wheelchairs and gurneys are stored, packages that are at high risk of theft, such as medication, and monitor at-risk wandering patients.

uTrust UHF Credentials

Staff can keep their access cards in their pocket, badge, or bag at all times; the long-read range also allows tracking of people to increase personal safety and capture guest/visitor data.
