Velocity 3.1: End of Support Notice

In accordance with Identiv's release of Hirsch Velocity 3.6, and our standard policy on software support, we are announcing the End of Support (EOS) for Velocity 3.1, which will be effective on April 1, 2016.

Software upgrades are a great opportunity for Identiv solution providers to reach out to the installed base. Changing needs often lead to additional workstations, controllers, readers, video, integrations and custom services in conjunction with software upgrades.

Newer versions deliver more effective security and numerous features and bug fixes. To review new features by version or find out additional information click on [VELOCITY](#).

Please contact your Identiv Regional Manager so they can work with you to put together a plan to get upgraded before Velocity 3.1 support runs out April 1, 2016.

As a reminder, support is no longer available for Velocity 3.0 and older unless clients purchase per-incident support.
