Velocity Web Services Client 3.8.1.498 Release Notes

Copyright© 2020, Identiv. Last updated on July 10, 2020.

New features and Improvements

Photo Call-Up

- **Added support for "two person rule":** there are specific door configurations that require two credentials for the door to open. This scenario is now accounted for in this feature where when this happens both credentials appear in Photo Call-Up.

Alarms

- Custom audio files for Alarms: now the user will be able to customize their alarms with different audio files and be able to reproduce them on the web like they do in the velocity client application.
- Alarms section works the same way as the Velocity client application when the user enables "**Report Return to Normal Alarms**" and/or "**Auto Acknowledge of Return to Normal**".

Status Dashboard

- **Widgets on the screen are now Operator Role Permissions:** added validation checkboxes to hide/show depending on the role permission.

Device Control

Door Groups and Master Door Groups

- **View, Add, Edit, and Delete:** in the Device Control tab under "Velocity Configuration". You will now have the ability to "Add", "Edit" and "Delete" Door Groups and Master Door Groups.
- **Add New Standard Door Group empty:** the same instructions as before, but now the user can save it empty (no doors or time zones) as the user needs to.

"Standard, Master and Grand Master" Time Zones

- **View, Add, Edit and Delete:** in the Device Control tab under "Velocity Configuration" you will find the screen to View, Add, Edit, and Delete each of these Time zones.
- **Based on Role permission:** only certain types of users will have access to these features, based on the role of their account (Administrators can use them and will give permissions to certain users).

Enrollment Manager

- **Upload and Edit Photo for User in Enrollment:** now the user can edit the photo of a person. Go to "Enrollment", select a person from "Person Groups" and after the information loads in the "General" tab, select the button on top of the photo "Edit Photo". Here you can zoom and move the photo as the user needs to, to specify what part of the photo will appear as the person ID.
- **Warning dialogue is displayed when a user makes modifications to a person without saving the changes:** now if the user starts making changes to a person's information and wants to move from current record to another or a different section of the web page it will prompt them to save the changes made previously.
- **Unassigned credentials can now be assigned to a person.**
- **You can filter out people based on the role permission of the user.**

Limit the search results for the Person Group selected: **If the user has selected a Person Group when using Search it should filter the persons to only show the results that apply to this group.**

New Features

Reference ID	Summary
IDAK-267	Add ability to create Standard, Master and Grand Master Time Zones
IDAK-274	Add Velocity Services to Performance Status Widget
