Identiv has developed seamless intrusion detection system integrations with our award-winning Hirsch Velocity Software security management system. A fully integrated Velocity access control solution and intrusion system provides greater security to protect your environment.

In this integration, our security platform combines access control and video management with the popular Bosch intrusion alarm system, all in a single pane.

**Integrated Solution, Single Trusted Provider**
Identiv’s framework solution allows for Hirsch Velocity to integrate with intrusion systems. Paired with existing video management systems, Velocity provides a complete control platform to protect facilities and give you full security control over your entire operation.

**Robust Intrusion Detection Solution**
Velocity now allows control of the intrusion system’s arming status by area or for the entire installation. The system also allows for unique points or zones to be bypassed or unbypassed, while also giving users the ability to trigger outputs tied into the intrusion system.

Velocity incorporates the system labels that are programmed into the intrusion system to allow for quick identification of unique points/zones, areas, or outputs. These labels are visible in the Velocity Event Viewer whenever the status of that specific component of the intrusion system changes.

Every Velocity system includes Graphics, allowing you to create and manage your access control, video, and intrusion systems in one intuitive, easy-to-use map. Simply upload facility floor plans to build custom maps with easy-to-create areas and drag-and-drop icons that match your system’s hardware.

**General:**

| Arm/Disarm Panels or Areas                   | The IDS Framework gives authorized users the ability to arm/disarm areas or an entire intrusion system — arming levels include:  
|                                              | • Disarm  
|                                              | • Arm Away  
|                                              | • Arm – Stay One Arm  
|                                              | • Arm – All on Instant  
|                                              | • Arm – All on Delay  
|                                              | • Arm – Part on Instant  
|                                              | • Arm – Part on Delay  
|                                              | • Arm – Force Away Arm  
|                                              | • Arm – Force All on Delay  
|                                              | • Arm – Force All on Instant  
|                                              | • Arm – Force Stay One Arm |
| Bypass/Reset Points or Zones                 | Select and bypass or reset specific points/zones in the intrusion system    |
| Trigger Programmed Outputs                   | Select and turn on/off programmed outputs tied to the intrusion system      |
| Silence Alarm Bells                           | Silence alarm bells in the case of unwanted alarm activity                 |
| View System Status                           | View arming levels and system status on the Velocity control interface      |
| Create Customizable Graphical System Maps    | Import floor plans to overlay custom areas and place points/zones and outputs to match specific installations  
|                                              | Customize graphics to color code status-specific alarm perimeters and interiors  
|                                              | Control arming, disarming, point/zone status, and outputs by selecting spots on the graphical floor plan |
| Alarm Actions and Notes                      | Velocity allows authorized users to see pre-programmed commands on how to respond to specific alarms and enter response notes to detail actions taken |

Identiv (NASDAQ: INVE) is a global provider of physical security and secure identification. Identiv's products, software, systems, and services address the markets for physical and logical access control, video analytics and a wide range of RFID-enabled applications. Customers in the government, enterprise, consumer, education, healthcare, banking, retail, and transportation sectors rely on Identiv's access and identification solutions. Identiv's mission is to secure the connected physical world: from perimeter to desktop access, and from the world of physical things to the Internet of Everything.

Identiv has offices worldwide. Addresses and phone numbers are listed at identiv.com/contact. For more information, visit identiv.com or email sales@identiv.com.
