

3VR Prime

Video Management System (VMS) as a Service

Identiv's 3VR Prime video management system (VMS) as a service solution gives users world-class hardware and software with free access to the latest updates and support.

Identiv's 3VR Prime is the industry's first complete video management system (VMS) as a service solution, giving users world-class, enterprise, fully scalable, analytics-integrated hardware and software with free access to the latest updates, perpetual hardware refresh, and full technical support.

The innovative 3VR Prime system as a service solution evolves as you evolve. Add cameras to a site, add more sites, add analytics to cameras, or connect more sites to your server at any time — your subscription grows with your business.

For all 3VR appliances, the operating environment is fully locked down. That means no malware can be installed. As new OS patches become available from the developer, those patches are instantly at your IT team's fingertips. At the same time, your security team has access to any and all software updates during the life of your 3VR Prime system.

3VR Prime features all of the great benefits offered by an enterprise-grade VMS with none of the upfront or maintenance hassles.

Money-Saving

- No up-front hardware or software investment
- All 3VR Prime hardware is always under warranty

System as a Service

- Subscription-based
- Industry's first VMS as a service

Scalable, Leverageable

- 3VR Prime scales with your business
- Use your existing client hardware

Always Up-to-Date

- All software and OS updates are included
- If hardware becomes unrepairable or obsolete, we'll replace it for free
