

# 3VR VIDEO INTELLIGENCE PLATFORM™ AXIS A1001 INTEGRATION

AXIS A1001 access control integrated with 3VR's Event Management provides event-driven video viewing and integrated alarm management by correlating live and recorded video with access control events.

## THE 3VR AND AXIS A1001 INTEGRATION DELIVERS:

### SEAMLESS INTEGRATED SOLUTION

- Integrated Solution providing the power of video analytics and search capabilities of 3VR with Access control from AXIS.
- Single Unified 3VR VisionPoint User Interface to view and administer AXIS A1001 access control events.
- Map 3VR channels to "Door" names. Any number of channels can be mapped to any number of doors.
- Monitoring Specific access control events within 3VR VisionPoint User Interface like Access Granted/Denied, Door Forced Open, Door Open too long warning, Door open too long alarm (Door Held).
- Simplified single 3VR VisionPoint User interface for all administration of AXIS A1001 controls, it allows users to configure doors, users, groups and schedules for Axis PACS device.
- All Axis A1001 triggers map to 3VR events. If no Video channel is mapped to the door, events can still be searched within 3VR Vision Point User Interface.

### DECREASED INVESTIGATION TIMES, INCREASED SUCCESS RATES

- Quickly search surveillance video using any datapoint (User ID, door ID, access type and reason) in the system to dramatically reduce investigation time.
- Index all events from the access control system in the database and automatically tag the events to video.
- Powerful Facial Surveillance, License Plate Recognition (LPR) and other 3VR Analytics integrate with badge data to search for faces and license plates, associated with fraudulent card activity.

### INTEGRATION ARCHITECTURE

- Integration with AXIS A1001 done using a 3VR data integration plug-in.
- One to one mapping between 3VR VisionPoint instance and AXIS A1001 Access Control
- The 3VR Plug-in listens to onvif:AccessControl and onvif:Door events coming in on the RTSP metadata event stream.
