

# VISIONPOINT™ EXTENDED STORAGE SERVER SOFTWARE

Back up video to external location, network attached storage (NAS) or a storage area network (SAN) without losing the ability to search.

Add redundancy to VisionPoint™ VMS or 3VR Network Video Recorders (NVR) or Hybrid Video Recorders (HVR) using 3VR’s VisionPoint Extended Storage Server (ESS) software. ESS transfers video and metadata to external storage devices as a scheduled or live back up. Video is then archived and can be searched locally or remotely with 3VR’s OpCenter.

## REDUNDANT AND ARCHIVED STORAGE

- Install VisionPoint Extended Storage Server Software on third-party hardware to store and retrieve video data from VMS servers, NVRs/HVRs, and NAS/SAN storage
- Storage can be on a local or external network
- Back up can be scheduled during off-peak hours to optimize network load
- Continuous live back up supported
- Archive video per camera or entire NVR/HVR
- Choose length of back up (days, weeks, months, or even years) while retaining the ability to search
- Store only events or continuous video
- Back up multiple VMS servers to one extended storage server
- ESS can be installed on NVR/HVR or VMS Server
- 1-year software warranty included

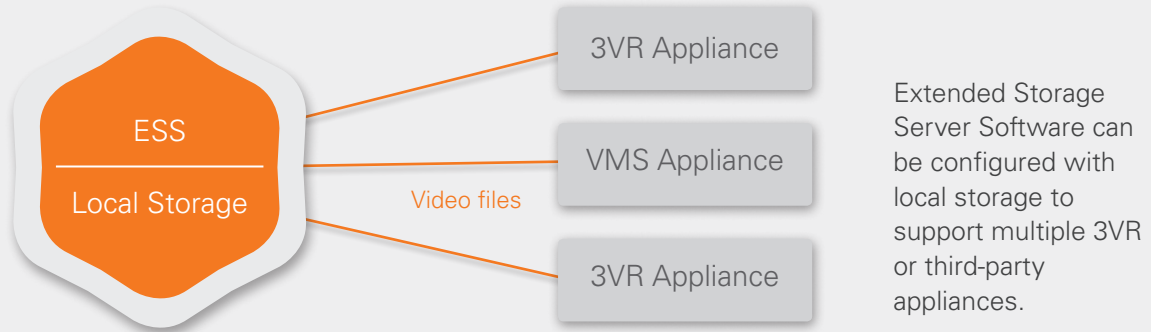

## SEARCHABILITY

- Archived video is searchable based on motion or analytic events
- If analytics applied to original video, the ability to search archived video by faces, speed, direction, colors, object size, license plates, age and gender, dwell time (loitering), and other search parameters is retained
- If network or back up fails first time, ESS will try five more times before sending a health alert
- Low disk space health alert to allow administrator enough time to extend storage
- Authentication for secure video

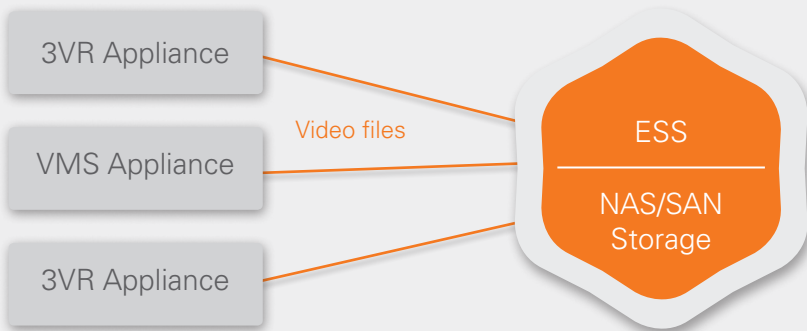

## ACCESSIBILITY

- Using 3VR’s OpCenter, archived video can be accessed seamlessly from the local server
- Client software supported to access archived video remotely
- Easy setup: simply choose path and which server or NVR/HVR to back up

# VISIONPOINT™ EXTENDED STORAGE SERVER SOFTWARE

Extended Storage Server Software can be configured with local storage to support multiple 3VR or third-party appliances.

## ORDERING INFO

### Product

3VR VisionPoint™ Extended Server Storage Software

### Product Code

VP-SE-ESS
