

U.S. GOVERNMENT

FICAM SOLUTION

Identiv's award-winning, APL-certified, end-to-end U.S. Government FICAM Solution was developed to implement a simple, affordable solution with optimal performance.

In today's physical access world, existing FICAM solutions are expensive, slow, and increasingly difficult to set up. Our Hirsch conceptual approach to FICAM and the FIPS 201 Topology Categories addresses your current PACS Infrastructure, Validation System, and PIV Readers. It's faster and less expensive than the competition.

The Hirsch FICAM solution is built from our highly secure product portfolio, and includes Hirsch Velocity Software, Hirsch Mx-8 Controllers, uTrust TS Readers, SNIB3, and REB8.

Our Freedom Access Control security solution is also fully FICAM, FIPS-201, and HSPD-12-compliant. Freedom provides the U.S. federal government with the best, frictionless access control and authentication solution on the market today, encrypting all data to eliminate the opportunity for cyber threats and ensuring the highest level of security.

Freedom's software-defined physical security perimeter eliminates complex control panel configurations and replaces them with technology that communicates over encrypted IP-network protocols.

Need to Secure a Federal Site in the U.S.?
